

SERVING DRILL

45) Throw Down Serves:

Level: 3.5 & Higher

Clever serve games for measuring accuracy.

Player 1 is the server and player 2 is on the opposite side.

Player 2 will be determining what **exit target** player 1 should try to hit;

The game starts with player 1 serving to the deuce court. That means player 2 can pick any of the exit targets on that side of the court.

If the server successfully makes his serve exit through the correct target area, he wins the point and is up 15-love.

If the server misses the serve, or it exits through the incorrect target, then player 2 (returner) wins the point and is up 15-love.

Points are played alternating between deuce and ad side until a game or even an entire set is done.

We love this game because it teaches the returner which target areas are problematic for the server and lets the server get good feedback about how accurate his serves really are.
